

Color Management and the Epson 2000P Printer

According to Monaco Systems who produce some very nice Color Profile generation software there is a problem generating profiles for the Epson 2000P printer. According to Monaco, Epson has agreed that the problem is with the Epson inks for the 2000P which are pigment based and not the dye based inks used in the Epson 1270 and 1280 models. Again according to Monaco, Epson has halted production of the 2000P printer until they can solve the problem.

While I agree that this is one-sided information, only from Monaco, I consider the source fairly reliable. It is at least worth an investigation before you make a decision to buy the more expensive Epson 2000P printer.
